

TIMEMORE Brewer Set

Slow coffee time

Extraction in 3 layers

Fit paper filter perfectly in a 3-Layer construction. Beginners can also have the clear instructions.

Closer fit with paper

Concave surface ensured a closer fit with paper filters, which makes a even extraction.

Smoother Permeability

With a better permeability, you don't have to worry about the over-extraction of slow water-flow.

Diamond-like luster

It shows dazzling light like a diamond in the sun.

CRYSTAL EYE DRIPPER

A good gift for coffee nerds

Precise design for Professional Extraction

A. Sealed Layer

Filter paper and dripper fit fully. There is no groove between them. Water can't pass. It can control the water-flow when you pour in a larger water flow.

B. Water Layer

The area of the concaves is gradually reduced to control the flow rate.

C. Coffee Layer

15 / 20g ground coffee will just take over this layer.
There are not many ribs in this layer but more grooves
It's similar to the flannel-like extraction.

Filter fully fits the dripper

Food-grade PCTG material

Safe and healthy Use with confidence

Selected PCTG material with high light transmission and high water-inducing

Extra thick glass with PP Base

There is a layer of silicon ring between the dripper and the base
The Base is detachable

TIMEMORE Standard

Aesthetic Premium Quality

Temp
difference 150°C
